

1929. No. 1.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHS
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED
INFECTIOUS DISEASES

NOTIFIED IN BOROUGH, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 5TH JANUARY,
1929

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:
Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;
York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;
15, Donegall Square West, Belfast;
or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 5TH JANUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the first week of the year numbered 7,416 corresponding to an annual rate of 19·6 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,718 (248 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Dec. 15.	Dec. 22.	Dec. 29.	Jan. 5.
107 Great Towns	12·8	14·8	14·5	15·2
London	12·6	14·7	14·7	15·1
Birmingham	11·2	14·1	13·0	14·7
Liverpool	12·9	15·8	15·0	18·6
Manchester	14·4	18·3	16·9	13·4
Sheffield	11·1	12·5	14·0	15·1
Leeds	13·2	17·6	17·2	17·8
Bristol	11·8	15·1	15·3	14·7
West Ham	8·6	13·7	14·2	16·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 92 against 84, 88 and 86 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,743 live births corresponding to an annual rate of 20·0 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 26 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,319 (38 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 84 against 67, 78 and 80 in the three weeks preceding.

London and other Towns: Births and Deaths.

BELFAST† ..	416,151	184	?	151	23	-	4	1	2	-	2	1

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated for the middle of 1929, that of Dublin is estimated for the middle of 1928 and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col. ..		Sum 3.6	Sum 55.2	26

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1919.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.
The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.27 ins. at the beginning of the week to 28.94 ins. by 16h. on December 30th; increased generally to 30.27 ins. by 20h. on January 3rd; decreased and was 30.00 ins. by midnight on January 6th.

Instrument out of action.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 12TH JANUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the second week of the year numbered 6,591 corresponding to an annual rate of 17·4 per 1,000 living: stillbirths numbered 249 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,200 (481 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Dec. 22.	Dec. 29.	Jan. 5.	Jan. 12.
107 Great Towns	14·8	14·5	15·2	16·4
London	14·7	14·7	15·1	17·5
Birmingham	14·1	13·0	14·7	15·9
Liverpool	15·8	15·0	18·6	19·2
Manchester	18·3	16·9	13·4	16·5
Sheffield	12·5	14·0	15·1	11·9
Leeds	17·6	17·2	17·8	18·9
Bristol	15·1	15·3	14·7	14·7
West Ham	13·7	14·2	16·4	16·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 91 against 88, 86 and 92 in the preceding three weeks. During the last four weeks deaths from influenza numbered 69, 83, 99 and 122 respectively.

In London (Administrative County including the City of London) there were 1,438 live births corresponding to an annual rate of 16·5 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,528 (209 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 85 against 78, 80 and 84 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case. This has been provisionally classified to small-pox and assigned to Halifax C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including one death from small-pox.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30·10 ins. at the beginning of the week to 29·83 ins. by 7h. on 6th; increased to 30·63 ins. by 22h. on 8th; decreased to 30·27 ins. by 13h. on 10th; increased generally to 30·53 ins. by 21h. on 12th; decreased and was 30·51 ins. by midnight on the same day.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute polio-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 19TH JANUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the third week of the year numbered 6,545 corresponding to an annual rate of 17·3 per 1,000 living: stillbirths numbered 288 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,605 (405 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Dec. 29.	Jan. 5.	Jan. 12.	Jan. 19.
107 Great Towns	14·5	15·2	16·4	17·5
London	14·7	15·1	17·5	19·0
Birmingham	13·0	14·7	15·9	15·3
Liverpool	15·0	18·6	19·2	22·3
Manchester	16·9	13·4	16·5	17·5
Sheffield	14·0	15·1	11·9	15·4
Leeds	17·2	17·8	18·9	17·4
Bristol	15·3	14·7	14·7	17·6
West Ham	14·2	16·4	16·2	14·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 94 against 86, 92 and 91 in the preceding three weeks. During the last four weeks deaths from influenza numbered 83, 99, 122 and 179 respectively.

In London (Administrative County including the City of London) there were 1,447 live births corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 51 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,657 (129 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 74 against 80, 84 and 85 in the three weeks preceding.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

The returns received for the month of December last include 2 deaths belonging to areas outside the County Boroughs and Great Towns, certified as due to small-pox either as principal or contributory cause. These deaths have been provisionally classed to small-pox and assigned to the following areas:—

Lancashire	Oswaldtwistle U.D.
Worcestershire	Droitwich R.D.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week: those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea : no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1915.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 30'51 ins. at the beginning of the week to 29'65 ins. by 15h. on 15th; increased generally to 30'15 ins. by 18h. on 16th; decreased and was 30'14 ins. by midnight on the same day.

Instrument out of action.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 26TH JANUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fourth week of the year numbered 6,426 corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 286 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,860 (256 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Jan. 5.	Jan. 12.	Jan. 19.	Jan. 26.
107 Great Towns	15·2	16·4	17·5	18·2
London	15·1	17·5	19·0	19·7
Birmingham	14·7	15·9	15·3	15·0
Liverpool	18·6	19·2	22·3	26·9
Manchester	13·4	16·5	17·5	20·4
Sheffield	15·1	11·9	15·4	13·6
Leeds	17·8	18·9	17·4	14·8
Bristol	14·7	14·7	17·6	15·3
West Ham	16·4	16·2	14·2	16·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 90 against 92, 91 and 94 in the preceding three weeks. During the last four weeks cases in which influenza was stated to be either a primary or contributory cause of death numbered 99, 122, 179 and 321 respectively.

In London (Administrative County including the City of London) there were 1,451 live births corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,714 (57 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 64 against 84, 85 and 74 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
JANUARY.					
SUNDAY .. 20		7.8	8.5	Cloudless throughout. Mist 7h. till 10 $\frac{1}{2}$ h., and 2 $\frac{1}{2}$ h. till 2 $\frac{3}{4}$ h. Hoar frost in morning and at night.	The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. The reading of the barometer decreased from 30.14 ins. at the beginning of the week to 29.96 ins. by 16h. on 21st; increased to 30.16 ins. by 21h. on 23rd; decreased to 29.54 in. by 5h. on 28th; increased and was 30.00 in. by midnight on the same day.
MONDAY .. 21		0.0	8.5	Cloudless till 7h., becoming overcast by 9h. Fog from 7h. Hoar frost in morning. Damping 11h. till 1 $\frac{1}{2}$ h. and from 20 $\frac{1}{2}$ h. Rain 17 $\frac{1}{2}$ h. till 2 $\frac{3}{4}$ h.	
TUESDAY .. 22		0.0	8.6	Overcast and fog throughout. Damping till 2h., and from 13 $\frac{1}{2}$ h.	
WEDNESDAY 23		0.0	8.6	Overcast. Fog till 1h., then mist. Damping till 6h.	
THURSDAY 24		0.0	8.7	Overcast generally. Slight mist till 9h. Rain 13 $\frac{1}{2}$ h. till 13 $\frac{3}{4}$ h.	
FRIDAY .. 25		0.0	8.7	Cloudy till 7h.; becoming overcast by 8h. Hoar frost and slight fog in morning. Occasional slight snow between 8 $\frac{1}{2}$ h. and 11h.; and 14h. till 15 $\frac{1}{2}$ h.	
SATURDAY 26		5.9	8.8	Variably cloudy becoming cloudless by 10 $\frac{1}{2}$ h. Hoar frost in morning and at night.	
No. of Col. ..	26	Sum 13.7	Sum 60.4		
		27	28		

The Registrar-General's DECENNIAL SUPPLEMENT

1921.

PART TWO.

Occupational Mortality, Fertility and Infantile Mortality.

A volume dealing with occupational mortality in England and Wales based upon the deaths in the three years around each Census is issued decennially.

The present volume contains 116 pages of abstracts showing the deaths and death-rates at several age groups from certain causes in upwards of 170 occupations, and 102 pages of letterpress with 5 diagrams in which the variations of the mortality, fertility and infantile mortality in the several occupations and social classes are fully discussed.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics:—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 2ND FEBRUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifth week of the year numbered 6,243 corresponding to an annual rate of 16.5 per 1,000 living: stillbirths numbered 275 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 7,944 (1,083 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Jan. 12.	Jan. 19.	Jan. 26.	Feb. 2.
107 Great Towns	16.4	17.5	18.2	21.0
London	17.5	19.0	19.7	23.9
Birmingham	15.9	15.3	15.0	14.1
Liverpool	19.2	22.3	26.9	36.7
Manchester	16.5	17.5	20.4	28.1
Sheffield	11.9	15.4	13.6	13.6
Leeds	18.9	17.4	14.8	18.6
Bristol	14.7	17.6	15.3	15.4
West Ham	16.2	14.2	16.2	18.2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 116 against 91, 94 and 90 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the death-rates per thousand population in the aggregate of the Great Towns and in the Great Towns of the North, Midlands, South, Wales and Greater London.

—	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.
Week ended 12th Jan.	0.3	0.3	0.4	0.3	0.3	0.3
„ 19th „	0.5	0.5	0.4	0.8	0.3	0.4
„ 26th „	0.9	1.1	0.4	1.5	0.5	0.8
„ 2nd Feb.	1.7	2.1	0.5	2.6	0.5	1.9

In London (Administrative County including the City of London) there were 1,332 live births corresponding to an annual rate of 15.3 per 1,000 living: stillbirths numbered 43 corresponding to a rate of 31 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 2,078 (364 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 102 against 85, 74 and 64 in the three weeks preceding.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col. . . .	26	Sum -0.7	Sum 82.9	

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.00 ins. at the beginning of the week to 29.82 ins. by 7h. on January 28th; increased to 29.99 ins. by 11h. on January 30th; decreased to 29.63 ins. by 8h. on February 1st; increased to 29.76 ins. by 1h. on February 2nd; decreased to 29.66 ins. by 14h. on February 2nd; increased and was 29.72 in. by midnight on the same day.

Instrument out of action.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 9TH FEBRUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the sixth week of the year numbered 6,593 corresponding to an annual rate of 17.4 per 1,000 living: stillbirths numbered 279 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 8,520 (576 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Jan. 19.	Jan. 26.	Feb. 2.	Feb. 9.
107 Great Towns	17.5	18.2	21.0	22.6
London	19.0	19.7	23.9	28.5
Birmingham	15.3	15.0	14.1	15.8
Liverpool	22.3	26.9	36.7	33.6
Manchester	17.5	20.4	28.1	33.1
Sheffield	15.4	13.6	13.6	14.2
Leeds	17.4	14.8	18.6	22.9
Bristol	17.6	15.3	15.4	17.3
West Ham	14.2	16.2	18.2	27.4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 119 against 94, 90 and 116 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

Week ended	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the sea :
no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 29.72 ins. at the beginning of the week to 30.20 ins. by 12h. on 7th; decreased and was 29.73 ins. by midnight on the 9th.

Overcast till 7h.; partially cloudy till 10h.; then cloudless. Rain about 0h. Hoar frost and slight haze at night.

Cloudless till 22h., then becoming nearly overcast by 23h. Hoar frost throughout. Fog from 6h.

Overcast. Fog till 1h., and from 7h. till 23h. Hoar frost in morning.

Overcast. Fog 8h. till 11h.; then slight fog till 18h. Dew in morning and at night.

Overcast generally till 16h., then variably cloudy. Hoar frost in morning and at night.

Overcast till 12h.; partially cloudy till 18h.; then cloudless. Haze 13h. till 18h., then fog and hoar frost.

Cloudless till 5h.; then becoming overcast by 7h. Slight fog 7h. till 9h.; then mist till 21h. Hoar frost in morning. Slight rain 14h. till 15h. Rain 16h. till 22h.

Instrument out of action.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 16TH FEBRUARY,
1929**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliо-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 16TH FEBRUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the seventh week of the year numbered 5,522 corresponding to an annual rate of 14·6 per 1,000 living: stillbirths numbered 314 corresponding to a rate of 54 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 9,205 (685 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Jan. 26.	Feb. 2.	Feb. 9.	Feb. 16.
107 Great Towns	18·2	21·0	22·6	24·4
London	19·7	23·9	28·5	28·8
Birmingham	15·0	14·1	15·8	17·6
Liverpool	26·9	36·7	33·6	26·9
Manchester	20·4	23·1	33·1	38·8
Sheffield	13·6	13·6	14·2	14·8
Leeds	14·8	18·6	22·9	34·7
Bristol	15·3	15·4	17·3	18·0
West Ham	16·2	18·2	27·4	28·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 125 against 90, 116 and 119 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

Week ended	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight. The height of the column of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the correction of the mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1903.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.73 ins. at the beginning of the week to 29.64 ins. by 9h. on 10th; increased to 29.86 ins. by 9h. on 11h.; decreased to 29.74 ins. by 21h. on 11h.; increased to 29.98 in. by 20h. on 12th.; decreased generally to 29.46 ins. by 17h. on 15th.; increased and was 29.65 ins. by midnight on the 16th.

Instrument out of action.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 23RD FEBRUARY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the eighth week of the year numbered 6,789 corresponding to an annual rate of 17·9 per 1,000 living: stillbirths numbered 326 corresponding to a rate of 46 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 12,006 (2,801 more than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 2.	Feb. 9.	Feb. 16.	Feb 23.
107 Great Towns	21·0	22·6	24·4	31·8
London	23·9	28·5	28·8	36·0
Birmingham	14·1	15·8	17·6	27·5
Liverpool	36·7	33·6	26·9	25·3
Manchester	28·1	33·1	38·8	38·3
Sheffield	13·6	14·2	14·8	22·4
Leeds	18·6	22·9	34·7	66·0
Bristol	15·4	17·3	18·0	27·4
West Ham	18·2	27·4	28·3	35·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 162 against 116, 119 and 125 in the preceding three weeks. The deaths from whooping cough numbered 249 against 149, 188 and 229 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

Week ended	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.

23rd " "	4·67	5·19	3·84	3·52	1·20	5·35

In London (Administrative County including the City of London) there were 1,543 live births corresponding to an annual rate of 17·7 per 1,000 living: stillbirths numbered 67 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 3,134 (629 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 150 against 102, 105 and 104 in the three weeks preceding.

The great increase in the numbers of deaths, especially among old people, from influenza and from respiratory and circulatory diseases in LONDON during the recent severe weather, as shown in the following statement, may probably be regarded as indicative of similar increase in the country generally.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

The returns received for the month of January last include 4 deaths belonging to areas outside the County Boroughs and Great Towns, certified as due to small-pox either as principal or contributory cause. These deaths have been provisionally classed to small-pox and assigned to the following areas:—

Durham	...	Jarrow M.B.	Monmouthshire	...	Tredegar U.D.
Lancashire	...	Mossley M.B.	Flintshire...	...	St. Asaph R.D.

BELFAST† ..	415,151	192	?	204	25	1	9	-	1	-	3	20

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available period.

No. of Col. . .	26	27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 29.85 ins. at the beginning of the week to 30.34 ins. by 1h. on 21st; decreased and was 29.49 ins. by midnight on the 23rd.

Instrument out of action.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains
classified in 31 separate 'Tables,' a wealth of Statistical
data relating to public mortality. The figures given for
the year 1927 give exhaustive information relating to the
mortality of the population for more than 200 diseases, &c.
analysed by sex into age groups, together with a mass of
other figures on other aspects of public health, e.g., infec-
tious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations
of United Kingdom and Ireland, British Dominions, Colonies
and Possessions, and Foreign Countries; and for England
and Wales, Births by sex and legitimacy, Marriages by age
and civil condition, Divorces, Parliamentary and Local
Government Electors by sex, and particulars of changes
in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 2ND MARCH, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the ninth week of the year numbered 6,357 corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 289 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 11,925 (81 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 9.	Feb. 16.	Feb. 23.	Mar. 2.
107 Great Towns	22·6	24·4	31·8	31·6
London	28·5	28·8	36·0	31·7
Birmingham	15·8	17·6	27·5	41·8
Liverpool	33·6	26·9	25·3	20·4
Manchester	33·1	38·8	38·3	32·9
Sheffield	14·2	14·8	22·4	35·8
Leeds	22·9	34·7	66·0	56·4
Bristol	17·3	18·0	27·4	25·4
West Ham	27·4	28·3	35·7	28·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 152 against 119, 125 and 162 in the preceding three weeks. The deaths from whooping cough numbered 275 against 188, 229 and 249 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

In London (Administrative County including the City of London) there were 1,465 live births corresponding to an annual rate of 16·8 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 2,759 (375 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 151 against 105, 104 and 150 in the three weeks preceding.

The great increase in the numbers of deaths, especially among old people, from influenza and from respiratory and circulatory diseases in LONDON during the recent severe weather, as shown in the following statement, may probably be regarded as indicative of similar increase in the country generally.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results apply to the Civil Day or from midnight to midnight.
 The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1908. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the A. S. Ministry.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.
 In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
 The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
 The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -F, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.
 The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
 The reading of the barometer decreased from 29.49 ins. at the beginning of the week to 29.46 ins. by 15h. on February 24th; increased to 30.33 ins. by 10h. on March 1st; decreased and was 30.50 ins. by midnight on March 2nd.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 9TH MARCH, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the tenth week of the year numbered 7,335 corresponding to an annual rate of 19·4 per 1,000 living: stillbirths numbered 288 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 11,856 (69 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	Feb. 16.	Feb. 23.	Mar. 2.	Mar. 9.
107 Great Towns	24·4	31·8	31·6	31·4
London	28·8	36·0	31·7	28·9
Birmingham	17·6	27·5	41·8	49·1
Liverpool	26·9	25·3	20·4	20·4
Manchester	38·8	38·3	32·9	28·7
Sheffield	14·8	22·4	35·8	41·3
Leeds	34·7	66·0	56·4	38·9
Bristol	18·0	27·4	25·4	34·1
West Ham	28·3	35·7	28·3	26·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 149 against 125, 161 and 152 in the preceding three weeks. The deaths from whooping cough numbered 250 against 229, 249 and 275 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

Week ended	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.

In London (Administrative County including the City of London) there were 1,694 live births corresponding to an annual rate of 19·4 per 1,000 living: stillbirths numbered 52 corresponding to a rate of 30 per 1,000 total births (including stillborn): the civilian deaths (excluding

stillbirths) numbered 2,516 (243 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 121 against 104, 150 and 151 in the three weeks preceding.

The great increase in the numbers of deaths, especially among old people, from influenza and from respiratory and circulatory diseases in LONDON during the recent severe weather, as shown in the following statement, may probably be regarded as indicative of similar increase in the country generally:

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

			Sum 32.4	Sum 78.1	
No. of Col.	26	27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.30 ins. at the beginning of the week to 29.89 ins. by 15h. on 5th; increased to 30.31 ins. by 12h. on 7th; decreased generally and was 30.10 ins. by midnight on the 9th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 16TH MARCH, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the eleventh week of the year numbered 6,878 corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 282 corresponding to a rate of 39 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 9,658 (2,199 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Feb 23.	Mar. 2.	Mar. 9.	Mar. 16.
107 Great Towns	31·8	31·6	31·4	25·6
London	36·0	31·7	28·9	23·0
Birmingham	27·5	41·8	49·1	35·7
Liverpool	25·3	20·4	20·4	18·9
Manchester	38·3	32·9	28·7	24·4
Sheffield	22·4	35·8	41·3	30·3
Leeds	66·0	56·4	33·9	29·0
Bristol	27·4	25·4	34·1	28·0
West Ham	35·7	28·3	26·5	19·0

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 129 against 161, 152 and 150 in the preceding three weeks. The deaths from whooping cough numbered 254 against 249, 275 and 251 in the preceding three weeks.

The increase of deaths from influenza in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

Week ended	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.

16th " " ...	4·11	4·08	7·72	2·80	2·74	2·65

In London (Administrative County including the City of London) there were 1,526 live births corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 29 per 1,000 total births (including stillborn): the civilian deaths (excluding

stillbirths) numbered 2,006 (511 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 107 against 150, 151 and 122 in the three weeks preceding. Deaths from whooping cough numbered 81, the numbers in the preceding three weeks being 80, 86 and 75.

The great increase in the numbers of deaths, especially among old people, from influenza and from respiratory and circulatory diseases in LONDON during the recent severe weather, as shown in the following statement, may probably be regarded as indicative of similar increase in the country generally.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from small-pox.

§ Returns not received.

including deaths from croup in Bombay, Paris, Antwerp, Budapest, Warsaw and Rio de Janeiro.
 The deaths in this column relate to all ages for Bombay, Madras, and Oslo and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, and the German Cities.
 The estimated population and deaths refer to the civilian population only.
 The registration of Births in Bombay is incomplete.
 including 30 and 19 deaths from Cholera in Calcutta respectively, 4 in Madras, and 1 from Plague in Bombay.

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.10 ins. at the beginning of the week to 30.01 ins. by 18h. on 10th; increased generally to 30.36 ins. by 9h. on 13th; decreased generally and was 30.15 ins. by midnight on the 16th

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 23RD MARCH, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twelfth week of the year numbered 7,044 corresponding to an annual rate of 18·6 per 1,000 living: stillbirths numbered 315 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 8,079 (1,579 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	Mar. 2.	Mar. 9.	Mar. 16.	Mar 23.
107 Great Towns	31·6	31·4	25·6	21·4
London	31·7	28·9	23·0	20·4
Birmingham	41·8	49·1	35·7	24·5
Liverpool	20·4	20·4	18·9	17·5
Manchester	32·9	28·7	24·4	18·3
Sheffield	35·8	41·3	30·3	23·1
Leeds	56·4	38·9	29·0	20·9
Bristol	25·4	34·1	28·0	20·7
West Ham	28·3	26·5	19·0	17·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 117 against 152, 150 and 129 in the preceding three weeks.

The progress of the recent influenza epidemic in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

Week ended	Aggregate.	North.	Midlands (excluding Greater London).	South (excluding Greater London).	Wales.	Greater London.

In London (Administrative County including the City of London) there were 1,577 live births corresponding to an annual rate of 18·1 per 1,000 living: stillbirths numbered 60 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding

stillbirths) numbered 1,775 (231 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 98 against 151, 122 and 107 in the three weeks preceding. Deaths from whooping cough numbered 80, the numbers in the preceding three weeks being 86, 75 and 81.

The effect on the numbers of deaths, especially among old people, from influenza and from respiratory and circulatory diseases in LONDON of the severe weather in February and early March, is shown in the following statement, and may probably be regarded as indicative of similar effects in the country generally.

Week ended	Influenza.		Respiratory Diseases.		Heart and Circulatory Diseases.

Note:—The death from small-pox mentioned in the Return for last week as provisionally assigned to Holborn Met. B. should have been assigned to Finsbury Met. B.

Provisional death-rates per million population for England and Wales during the year 1928 are as follows:—

	Males.	Females.	Persons.
Respiratory Tuberculosis ...	879	641	755
Other Tuberculosis ...	188	159	173
Cancer ...	1,377	1,469	1,425

The provisional mortality per 1,000 live births in the year 1928 of women in childbirth, is as follows:—

Puerperal Sepsis ...	1.80
Other accidents and diseases of pregnancy and parturition ...	2.63

BELFAST† ..	415,151	163	?	139	18	-	1	-	5	1	-	6

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without their respective areas.

No. of Col. . .	26	27	28		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea ;

no correction has been applied to the readings to reduce to sea level 9h. A.M., noon, 3h. P.M., and 6h. P.M. The means

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 6h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb

thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending the

1903. With the corrected mean reading of the dry bulb thermometer is compared the corrected mean of the readings of the maximum and minimum thermometers, forming

the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values

of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - F. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased generally from 30.15 ins. at the beginning of the week to 29.87 ins. by 4h. on 22nd; increased and was 30.15 ins. by midnight on the 23rd.

Instrument out of action.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliо-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 30TH MARCH, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the thirteenth week of the year numbered 6,156 corresponding to an annual rate of 16·3 per 1,000 living: stillbirths numbered 311 corresponding to a rate of 48 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,427 (1,652 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Mar. 9.	Mar. 16.	Mar 23.	Mar. 30.
107 Great Towns	31·4	25·6	21·4	17·0
London	28·9	23·0	20·4	15·3
Birmingham	49·1	35·7	24·5	14·9
Liverpool	20·4	18·9	17·5	15·1
Manchester	28·7	24·4	18·3	18·1
Sheffield	41·3	30·3	23·1	13·9
Leeds	38·9	29·0	20·9	18·5
Bristol	34·1	28·0	20·7	18·5
West Ham	26·5	19·0	17·5	14·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 95 against 150, 129 and 117 in the preceding three weeks.

The progress of the recent influenza epidemic in the different parts of the country may be seen from the following statement, which shows the annual death-rates per thousand population in the aggregate of the Great Towns, in the Great Towns of the North, Midlands, South, and Wales and in Greater London.

In London (Administrative County including the City of London) there were 1,347 live births corresponding to an annual rate of 15·4 per 1,000 living: stillbirths numbered 67 corresponding to a rate of 47 per 1,000 total births (including stillborn): the civilian deaths (excluding

stillbirths) numbered 1,331 (444 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 85 against 122, 107 and 98 in the three weeks preceding. Deaths from whooping cough numbered 47, the numbers in the preceding three weeks being 75, 81 and 80.

The effect on the numbers of deaths, especially among old people, from influenza and from respiratory and circulatory diseases in LONDON of the severe weather in February and early March, is shown in the following statement, and may probably be regarded as indicative of similar effects in the country generally.

GREAT TOWNS

MORTALITY DURING THE FIRST QUARTER OF 1929.

Table 5 (page 429) shows that the deaths in the aggregate of the Great Towns during the first thirteen weeks of the year numbered 111,003 against 69,257 during the corresponding period of last year. These numbers included 12,711 deaths from influenza in 1929 against 1,467 in 1928.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

There was no death from small-pox in the returns received for the month of February last.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1928 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
MARCH.					
SUNDAY	24	6 6	12 3	Partially cloudy till 15h.; then variably cloudy. Hoar frost in morning. Solar halo 15h.	
MONDAY	25	2 5	12 4	Overcast till 13h.; cloudy till 15h.; then overcast. Shower 7h. Damping 16h. till 17h. Slight rain 17h. till 17h.	
TUESDAY	26	5 0	12 5	Overcast till 11h.; partially cloudy till 17h.; then cloudless. Slight fog 1h. till 9h.; and from 19h. Solar halo 16h. till 16h. Dew at night.	
WEDNESDAY	27	7 7	12 5	Cloudless. Slight fog till 2h.; thick fog till 11h.; then haze. Hoar frost in morning.	
THURSDAY	28	11 0	12 6	Cloudless till 6h.; partially cloudy till 9h.; then cloudless generally. Fog about 7h. Hoar frost in morning.	
FRIDAY	29	10 8	12 7	Cloudless till 11h.; partially cloudy till dusk then cloudless. Mist 6h. Fog 6h. till 7h. Hoar frost in morning and at night. Sun Pillar 16h.	
SATURDAY	30	10 5	12 7	Cloudless. Mist 5h. till 9h. Slight haze from 12h. Hoar frost in morning.	
No. of Col...	..	27	28		

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased generally from 30.15 ins. at the beginning of the week to 30.33 ins. by 7h. on 28th; decreased and was 30.29 ins. by midnight on the 30th.

Instrument out of action.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 6TH APRIL, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fourteenth week of the year numbered 6,438 corresponding to an annual rate of 17·0 per 1,000 living: stillbirths numbered 296 corresponding to a rate of 44 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,463 (964 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Mar. 16.	Mar. 23.	Mar. 30.	Apr. 6.
107 Great Towns	25·6	21·4	17·0	14·5
London	23·0	20·4	15·3	13·8
Birmingham	35·7	24·5	14·9	13·8
Liverpool	18·9	17·5	15·1	15·4
Manchester	24·4	18·3	18·1	15·3
Sheffield	30·3	23·1	13·9	12·6
Leeds	29·0	20·9	18·5	16·1
Bristol	28·0	20·7	18·5	16·1
West Ham	19·0	17·5	14·4	13·1

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 83 against 129, 117 and 95 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,381 live births corresponding to an annual rate of 15·8 per 1,000 living: stillbirths numbered 45 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,202 (129 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 72 against 107, 98 and 85 in the three weeks preceding. Deaths from whooping cough numbered 54, the numbers in the preceding three weeks being 81, 80 and 47.

During the week small-pox was mentioned as a cause of death in one case. This has been provisionally classified to small-pox and assigned to West Ham C.B.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox.

No. of Col.	27	28	

The results apply to the Civil Day or from midnight to midnight. The height of the disterm of the barometer is 152 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 30.11 ins. at the beginning of the week to 29.55 ins. by 16h. on April 1st, increased generally to 29.83 ins. by 0h. on April 4th, decreased to 29.54 ins. by 4h. on April 5th, increased and was 30.15 ins. by midnight on April 6th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poliomyelitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 13TH APRIL, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the fifteenth week of the year numbered 7,177 corresponding to an annual rate of 18·9 per 1,000 living: stillbirths numbered 299 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,203 (260 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Mar 23.	Mar. 30.	Apr. 6.	Apr. 13.
107 Great Towns	21·4	17·0	14·5	13·8
London	20·4	15·3	13·8	13·2
Birmingham	24·5	14·9	13·8	13·4
Liverpool	17·5	15·1	15·4	14·6
Manchester	18·3	18·1	15·3	15·0
Sheffield	23·1	13·9	12·6	12·0
Leeds	20·9	18·5	16·1	15·1
Bristol	20·7	18·5	16·1	12·7
West Ham	17·5	14·4	13·1	9·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 72 against 117, 95 and 83 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,500 live births corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 54 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,153 (48 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 71 against 98, 85 and 72 in the three weeks preceding. Deaths from whooping cough numbered 40, the numbers in the preceding three weeks being 80, 47 and 54.

During the week small-pox was mentioned as a cause of death in one case. This has been provisionally classified to small-pox and assigned to Acton M.B.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY .. 7		10.1	13.3	Variably cloudy. Haze 9h. till 19 ^h .	<p>The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 162 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometric Tables, issued by the Air Ministry. The average temperature of the air is that derived from a discussion of the observa- tions made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermo- meter, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; V. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day. The reading of the barometer decreased from 30.15 ins. at the beginning of the week to 29.80 ins. by 6h. on 9th ; increased to 29.93 ins. by 21h. on 9th ; decreased to 29.79 ins. by 12h. on 10th ; increased to 29.95 ins. by 21h. on 11th ; decreased to 29.74 ins. by 3h. on 13th ; increased and was 29.82 ins. by midnight on the same day.</p>
MONDAY .. 8		0.8	13.3	Variably cloudy. Slight fog 6h. till 9h. ; haze till 18 ^h . ; then mist.	
TUESDAY .. 9		1.8	13.4	Variably cloudy till 7h. ; overcast till 13 ^h . ; then variably cloudy. Showers 8 ^h . and 9 ^h . Occasional gloom between 10 ^h . and 12h. Hoar frost at night.	
WEDNESDAY 10		5.6	13.5	Overcast till 9h. ; variably cloudy till 17h. ; then overcast. Damping at 6h. and between 16h. and 21h. Slight rain 9h. till 9 ^h . ; 10 ^h . till 11h. ; and from 23h. Brisk wind 9h. till 16h.	
THURSDAY 11		2.2	13.5	Overcast till 5h. ; very cloudy till 12h. ; then overcast. Rain till 3h. ; and from 14 ^h . Sleet 21 ^h . Brisk wind from 7h. ; with high wind 12h. till 16h.	
FRIDAY .. 12		0.0	13.6	Overcast throughout. Sleet 4 ^h . till 5h. Damping till 10 ^h . Slight rain from 12h. Occasional sleet and snow between 15h. and 18 ^h . Brisk wind till 4h.	
SATURDAY 13		0.2	13.6	Overcast till 20 ^h . ; very cloudy till 21h. ; cloudless from 22h. ; becoming overcast again by 24h. Damping till 12 ^h . Slight wet fog from 18 ^h . till 22 ^h . Hoar frost at night.	<p>Instrument out of action.</p>

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 20TH APRIL, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the sixteenth week of the year numbered 7,275 corresponding to an annual rate of 19·2 per 1,000 living: stillbirths numbered 288 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,151 (53 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Mar. 30.	Apr. 6.	Apr. 13.	April 20.
107 Great Towns	17·0	14·5	13·8	13·6
London	15·3	13·8	13·3	13·5
Birmingham	14·9	13·8	13·4	12·1
Liverpool	15·1	15·4	14·6	14·2
Manchester	18·1	15·3	15·0	16·2
Sheffield	13·9	12·6	12·0	12·4

Bristol	18·5	16·1	12·7	13·7
West Ham	14·4	13·1	9·4	12·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 81 against 95, 83 and 72 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,614 live births corresponding to an annual rate of 18·5 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 32 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,176 (22 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 80 against 85, 72 and 71 in the three weeks preceding. Deaths from whooping cough numbered 37, the numbers in the preceding three weeks being 47, 54 and 40.

During the week small-pox was mentioned as a cause of death in two cases. These have been provisionally classified to small-pox and one assigned to Manchester C.B. and the other to Gillingham M.B.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox.

WEDNESDAY 17		8·3	13·9	Nearly cloudless till 15h.; then variably cloudy. Mist 1h. till 5h.; then fog till 9h. Hoar frost in morning. Lunar halo 2½h.
THURSDAY 18		4·8	14·0	Nearly overcast till 15h.; cloudy till 18h.; then becoming cloudless by 19h. Mist about 6h. Slight haze from dusk.
FRIDAY .. 19		12·6	14·0	Cloudless till 18h.; then cloudy. Hoar frost and slight haze in morning. Partial lunar halo about 22h.
SATURDAY 20		2·7	14·1	Overcast till 16½h.; then cloudy. Brisk wind 2h. till 6h.; and 8h. till 14h. Lunar halo 21½ till 22½h.
No. of Col. . .	26	27	Sum 97·4	Sum 97·4

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29·82 ins. at the beginning of the week to 29·83 ins. by 6h. on 11th; decreased to 29·58 ins. by 4h. on 15th; increased to 30·19 ins. by 9h. on 17th; decreased to 29·72 ins. by 14h. on 18th; increased to 30·07 ins. by 22h. on 20th; decreased and was 30·06 ins. by midnight on the same day.

Instrument out of action.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains
classified in 31 separate 'Tables,' a wealth of Statistical
data relating to public mortality. The figures given for
the year 1927 give exhaustive information relating to the
mortality of the population for more than 200 diseases, &c.
analysed by sex into age groups, together with a mass of
other figures on other aspects of public health, e.g., infec-
tious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations
of United Kingdom and Ireland, British Dominions, Colonies
and Possessions, and Foreign Countries; and for England
and Wales, Births by sex and legitimacy, Marriages by age
and civil condition, Divorces, Parliamentary and Local
Government Electors by sex, and particulars of changes
in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 27TH APRIL, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the seventeenth week of the year numbered 6,325 corresponding to an annual rate of 16·7 per 1,000 living: stillbirths numbered 285 corresponding to a rate of 43 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,604 (547 less than the number in the preceding week).

The annual death-rate in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Apr. 6.	Apr. 13.	April 20.	April 27.
107 Great Towns	14·5	13·8	13·6	12·2
London	13·8	13·3	13·5	12·5
Birmingham	13·8	13·4	12·1	11·8
Liverpool	15·4	14·6	14·2	12·1
Manchester	15·3	15·0	16·2	12·1
Sheffield	12·6	12·0	12·4	11·8
Leeds	16·1	15·1	14·4	13·9
Bristol	16·1	12·7	13·7	12·4
West Ham	13·1	9·4	12·2	8·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 64 against 83, 72 and 81 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,391 live births corresponding to an annual rate of 15·9 per 1,000 living: stillbirths numbered 48 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,092 (84 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 69 against 72, 71 and 80 in the three weeks preceding. Deaths from whooping cough numbered 45, the numbers in the preceding three weeks being 54, 40 and 36.

During the week small-pox was mentioned as a cause of death in two cases. These have been provisionally classified to small-pox and one assigned to Northampton C.B. and the other to Brentford and Chiswick U.D.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN
ENGLAND AND WALES.

The returns received for the month of March last include 1 death, belonging to an area outside the County Boroughs and Great Towns, certified as due to small-pox. This death has been provisionally classed to small-pox and assigned to Strood R.D. in the County of Kent.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox

APRIL.					
SUNDAY	21	wP till 13h.; then mP.	11.6	14.1	Nearly cloudless till 13h.; partially cloudy till 17h.; nearly overcast till 20h.; then nearly cloudless. Hoar frost in morning. Dew at night.
MONDAY	22	mP	10.7	14.2	Nearly cloudless till 5h.; cloudy till 11h.; partially cloudy till 20h.; then nearly overcast. Hoar frost in morning. Haze from sunset.
TUESDAY	23	mP	0.0	14.3	Overcast generally. Very slight damp- ing at 11h.; and 14h. till 15h.
WEDNESDAY	24	mP	6.8	14.4	Nearly overcast till 7h.; nearly cloudless till 12h.; then becoming overcast by 13h. Mist 5h. till 12h. Brisk wind 10h. till 16h. Damping 16h. till 16h.; and from 20h. till 21h.
THURSDAY	25	mP	3.2	14.4	Very cloudy till 9h.; nearly overcast till 18h.; then thin cloud prevalent. Mist about 5h. Haze 15h. till 20h.
FRIDAY	26	mP	1.9	14.5	Overcast till 3h.; very cloudy till 6h.; Overcast till 18h.; then partially cloudy. Mist 5h. till 9h. Occasional very light rain between 10h. and 12h.
SATURDAY	27	mP till 3h.; wP till 4h.; sN at 5h.; mP till 16h.; then wP.	2.7	14.5	Nearly overcast generally. Slight rain 4h. till 6h. Haze 14h. till 18h.
No. of Col. . .		26	27	28	
			Sum 36.9	Sum 100.4	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.
The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased generally from 30.05 ins. at the beginning of the week to 29.74 ins. by 4h. on 23rd; increased to 29.86 ins. by 23h. on 23rd; decreased to 29.72 ins. by 15h. on 24th; increased to 29.91 ins. by 8h. on 25th; decreased generally and was 29.47 ins. by midnight on the 27th.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 153 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased generally from 30.05 ins. at the beginning of the week to 29.74 ins. by 4h. on 23rd; increased to 29.86 ins. by 23h. on 23rd; decreased to 29.72 ins. by 15h. on 24th; increased to 29.91 ins. by 8h. on 25th; decreased generally and was 29.47 ins. by midnight on the 27th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 4TH MAY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the eighteenth week of the year numbered 6,732 corresponding to an annual rate of 17·8 per 1,000 living: stillbirths numbered 251 corresponding to a rate of 36 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,746 (142 more than the number in the preceding week).

The annual death-rate based on the 1928 populations now published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				Apr. 13.	April 20.	April 27.	May 4.
107 Great Towns	13·8	13·7	12·2	12·6
London	13·5	13·7	12·8	12·2
Birmingham	13·2	11·9	11·6	11·9
Liverpool	14·6	14·2	12·1	12·2
Manchester	14·9	16·1	12·0	13·9
Sheffield	12·2	12·6	12·0	12·7

Bristol	12·6	13·5	12·3	11·6
West Ham	9·7	12·6	8·7	12·2

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 75 against 72, 81 and 64 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,426 live births corresponding to an annual rate of 16·6 per 1,000 living: stillbirths numbered 56 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,039 (53 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 82 against 71, 79 and 69 in the three weeks preceding. Deaths from whooping cough numbered 31, the numbers in the preceding three weeks being 40, 36 and 45.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to West Ham C.B.

Note:—The death from small-pox mentioned in the Return for last week as provisionally assigned to Brentford and Chiswick U.D. should have been assigned to Acton M.B.

* Population adjusted by the exclusion of non-civilians.

† The populations of Edinburgh and Glasgow are estimated to the middle of 1929, that of Dublin is estimated to the middle of 1928, and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which can be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 28'47 ins. at the beginning of the week to 28'62½ ins. by 13h. on April 23h.; increased to 28'70 ins. by 8h. on May 1st; decreased to 28'62 ins. by 16h. on May 2nd; increased to 28'83 ins. by 22h. on May 3rd; decreased and was 28'62 ins. by midnight on May 4th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 11TH MAY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the nineteenth week of the year numbered 6,648 corresponding to an annual rate of 17·6 per 1,000 living: stillbirths numbered 327 corresponding to a rate of 47 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,782 (36 more than the number in the preceding week).

The annual death-rate based on the 1928 populations now published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				April 20.	April 27.	May 4.	May 11.
107 Great Towns	13·7	12·2	12·6	12·7
London	13·7	12·8	12·2	11·9
Birmingham	11·9	11·6	11·9	12·7
Liverpool	14·2	12·1	12·2	14·1
Manchester	16·1	11·9	13·9	13·8
Sheffield	12·6	12·0	12·7	11·6
Leeds	14·6	14·1	14·7	14·3
Bristol	13·5	12·3	11·6	12·3
West Ham	12·6	8·7	12·2	12·4

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 73 against 81, 64 and 75 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,569 live births corresponding to an annual rate of 18·3 per 1,000 living: stillbirths numbered 65 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 1,019 (20 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 64 against 79, 69 and 82 in the three weeks preceding. Deaths from whooping cough numbered 28, the numbers in the preceding three weeks being 36, 45 and 31.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to West Ham C.B.

Note.—One death from small-pox which has been provisionally assigned to Rochdale C.B. should have been reported in last week's return.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1928 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox.

§ As extended 1st April, 1929.

		27	28	

The results apply to the Civil Day or from midnight to midnight. The height of the column of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 30 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.82 ins. at the beginning of the week to 29.17 ins. by 11h. on 6th; increased to 30.04 ins. by 8h. on 10th; decreased and was 29.88 ins. by midnight on the 11th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 18TH MAY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twentieth week of the year numbered 7,004 corresponding to an annual rate of 18·5 per 1,000 living: stillbirths numbered 301 corresponding to a rate of 41 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,539 (243 less than the number in the preceding week).

The annual death-rate based on the 1928 populations now published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	April 27.	May 4.	May 11.	May 18
107 Great Towns	12·2	12·6	12·7	12·0
London	12·8	12·2	11·9	11·5
Birmingham	11·6	11·9	12·7	11·0
Liverpool	12·1	12·2	14·1	13·3
Manchester	11·9	13·9	13·8	13·9
Sheffield	12·0	12·7	11·6	11·5
Leeds	14·1	14·7	14·3	13·9
Bristol	12·3	11·6	12·3	14·7
West Ham	8·7	12·2	12·4	9·5

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 66 against 64, 75 and 73 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,475 live births corresponding to an annual rate of 17·2 per 1,000 living: stillbirths numbered 51 corresponding to a rate of 33 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 982 (37 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 60 against 69, 82 and 64 in the three weeks preceding. Deaths from whooping cough numbered 20, the numbers in the preceding three weeks being 45, 31 and 28.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to London (Woolwich Met. B.)

Note.—Two cases in which small-pox was mentioned as a cause of death should have been reported in earlier returns. One of these has been provisionally assigned to Lincoln C.B. (week ended 13th April) and the other to Stoke-on-Trent C.B. (week ended 20th April).

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Includes one death from smallpox.

§ As extended 1st April, 1929.

London and other Towns: Births and Deaths.

No. of Col. ..	26	Sum 43.2	Sum 108.7	28

The results apply to the Civil Day or from midnight to midnight.
 The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal magnetism from the observations made at Greenwich during the 65 years ending 1905.
 The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.
 The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
 The reading of the barometer decreased from 29.88 ins. at the beginning of the week to 29.76 ins. by 16h. on 12th; increased to 29.88 ins. by 8h. on 13th; decreased to 29.59 ins. by 16h. on 14th; increased generally to 30.06 ins. by 23h. on 17th; decreased and was 29.96 ins. by midnight on the 18th.

STATISTICAL REVIEW.

The Registrar General's Statistical Review of
England and Wales for the Year 1927.

TABLES. PART I. MEDICAL.

This volume of nearly 500 closely printed pages contains classified in 31 separate 'Tables,' a wealth of Statistical data relating to public mortality. The figures given for the year 1927 give exhaustive information relating to the mortality of the population for more than 200 diseases, &c. analysed by sex into age groups, together with a mass of other figures on other aspects of public health, e.g., infectious diseases, infant mortality, violent deaths, &c., &c.

Price 15s. net. Post Free 15s. 6d.

TABLES. PART II. CIVIL.

This volume contains the following statistics :—Populations of United Kingdom and Ireland, British Dominions, Colonies and Possessions, and Foreign Countries; and for England and Wales, Births by sex and legitimacy, Marriages by age and civil condition, Divorces, Parliamentary and Local Government Electors by sex, and particulars of changes in boundary of poor law and administrative areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 25TH MAY, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-first week of the year numbered 5,676 corresponding to an annual rate of 15·0 per 1,000 living: stillbirths numbered 270 corresponding to a rate of 45 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,452 (87 less than the number in the preceding week).

The annual death-rate based on the 1928 populations now published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				May 4.	May 11.	May 18.	May 25.
107 Great Towns	12·6	12·7	12·0	11·8
London	12·2	11·9	11·5	11·5
Birmingham	11·9	12·7	11·0	11·9
Liverpool	12·2	14·1	13·3	13·6
Manchester	13·9	13·8	13·9	13·2
Sheffield	12·7	11·6	11·5	10·9
Leeds	14·7	14·3	13·9	16·0
Bristol	11·6	12·3	14·7	11·1
West Ham	12·2	12·4	9·5	9·8

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68 against 75, 73 and 66 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,272 live births corresponding to an annual rate of 14·8 per 1,000 living: stillbirths numbered 56 corresponding to a rate of 42 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 982 (the same number as in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 67 against 82, 64 and 60 in the three weeks preceding.

During the week small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to Wimbledon M.B. (Surrey).

Note.—One death from small-pox which has been provisionally assigned to Rochdale C.B. should have been reported in the return for the week ended 13th April last.

MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES.

The returns received for the month of April last include four deaths belonging to areas outside Greater London, the County Boroughs and Great Towns in which small-pox was mentioned as a cause of death. These deaths have been provisionally classed to small-pox and assigned as follows:—two to Gravesend M.B. (Kent) and one each to Sale U.D. (Cheshire) and Caerphilly U.D. (Glamorgan).

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

† Includes one death from small-pox.

DATE.	ELECTRICITY. (For explanation of symbols, see Notes.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
MAY.					
SUNDAY	19	14.7	15.7	Cloudless generally with partially cloudy period 8h. till 9h. Dew and hoar frost in morning. Mist about 6h.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the mean of the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1910.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - F. positive; N. negative; W. weak; M. moderate; S. strong; V. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer decreased generally from 29.96 ins. at the beginning of the week to 29.60 ins. by 4h. on 24th; increased to 29.98 ins. by 11h. on 25th; decreased and was 29.92 ins. by midnight on the same day.</p>
MONDAY ..	20	14.4	15.8	Cloudless till 8h.; partially cloudy till 10h.; then cloudless. Hoar frost in morning.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 1ST JUNE, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-second week of the year numbered 7,224 corresponding to an annual rate of 19·1 per 1,000 living : stillbirths numbered 295 corresponding to a rate of 39 per 1,000 total births (including stillborn) : the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,005 (447 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				May 11.	May 18.	May 25.	June 1.
107 Great Towns	12·7	12·0	11·8	10·6
London	11·9	11·5	11·5	9·5
Birmingham	12·7	11·0	11·9	11·5
Liverpool	14·1	13·3	13·6	12·1
Manchester	13·8	13·9	13·2	13·0
Sheffield	11·6	11·5	10·9	8·7
Leeds	14·3	13·9	16·0	14·3
Bristol	12·3	14·7	11·1	11·1
West Ham	12·4	9·5	9·3	9·9

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 56 against 73, 66 and 68 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,551 live births corresponding to an annual rate of 18·1 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 29 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 814 (168 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 52 against 64, 60 and 67 in the three weeks preceding.

BELFAST† ..	415,151	206	?	89	16	-	-	-	2	-	2	-

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

§ As extended 1st April, 1929.

No. of Col...	26			

The results apply to the Civil Day or from midnight to midnight.
The height of the eastern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer.
The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; V. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.
The reading of the barometer decreased from 29.92 ins. at the beginning of the week to 29.76 ins. by 2h. on May 27th; increased to 30.12 ins. by 6h. on May 30th decreased to 29.91 ins. by 15h. on May 31st; increased to 30.10 ins. by 94h. on June 1st; decreased and was 29.93 ins. by midnight of the same day.

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 153 feet above the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer decreased from 29.99 ins. at the beginning of the week to 29.76 ins. by 2h. on May 27th; increased to 30.12 ins. by 6h. on May 30th decreased to 29.91 ins. by 15h. on May 31st; increased to 30.10 ins. by 94h. on June 1st; decreased and was 29.99 ins. by midnight of the same day.

THE
REGISTRAR-GENERAL'S

WEEKLY RETURN OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

**SATURDAY, 8TH JUNE,
1929**

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 8TH JUNE, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-third week of the year numbered 7,238 corresponding to an annual rate of 19·1 per 1,000 living: stillbirths numbered 264 corresponding to a rate of 35 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,945 (60 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—				May 18.	May 25.	June 1.	June 8.
107 Great Towns	12·0	11·8	10·6	10·5
London	11·5	11·5	9·5	10·0
Birmingham	11·0	11·9	11·5	9·4
Liverpool	13·3	13·6	12·1	12·3
Manchester	13·9	13·2	13·0	12·6
Sheffield	11·5	10·9	8·7	10·2
Leeds	13·9	16·0	14·3	14·0
Bristol	14·7	11·1	11·1	9·2
West Ham	9·5	9·3	9·9	8·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 61 against 66, 68 and 56 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,498 live births corresponding to an annual rate of 17·5 per 1,000 living: stillbirths numbered 53 corresponding to a rate of 34 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 854 (40 more than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 51 against 60, 67 and 52 in the three weeks preceding.

London and other Towns: Births and Deaths.

Table 1.—107 COUNTY BOROUGHs and GREAT TOWNS, GREATER LONDON, and FOUR SCOTTISH and IRISH TOWNS.

BELFAST† ..	415,151	190	?	114	17	1	1	1	2	-	1	1

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

§ As extended 1st April, 1929.

London and other Towns: Births and Deaths.

DATE. JUNE		ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY	2		1.1	16.3	Overcast generally. Rain or slight rain 6.3h. till 9.4h.	<p>The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M. and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1913.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.</p> <p>The reading of the barometer decreased to 29.99 ins. at the beginning of the week to 29.50 ins. by 12h. on June 4; increased to 29.62 ins. by 7h. on June 5; decreased to 29.13 ins. by 13h. on June 6; increased and was 29.70 ins. by midnight on June 8.</p>
MONDAY	3		4.0	16.3	Overcast or nearly so till 20.3h., then variably cloudy. Rain 3h. Slight shower 10.3h. Brist wind 12h. till 20h.	
TUESDAY	4		5.8	16.3	Very cloudy or nearly overcast. Showers 11.3h. and at 15.3h., heavy showers 12.3h., 16.3h. till 17.3h., and rain 19h. till 13.7h. Thunder and lightning 17h. till 17.3h.	
WEDNESDAY	5	No Record.	0.1	16.3	Cloudy till 4h., then overcast. Slight rain about 12h., and rain 13h. till 20.3h. Mist in morning.	
THURSDAY	6		1.1	16.4	Overcast generally till 20.3h., few clouds from 20h. Drizzle 0h. till 4h., and occasional slight rain 7.3h. till 15h. Dew at night.	
FRIDAY	7		11.2	16.4	Little cloud till 7h. variably cloudy till 10h. till 13.3h. Occasional showers 10h. till 13.3h. Solar halo 15h. till 18.3h. Dew in morning and at night.	
SATURDAY	8		0.3	16.4	Little cloud, becoming cloudy thin cloud by 1h. Overcast 7h. till 19.3h., cloudy or very cloudy till 22h., cloudless by 23h. Rain or drizzle 8h. till 12.3h. Dew in morning and at night.

REGISTRAR-GENERAL'S

WEEKLY RETURN OF BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES
AND OTHER GREAT TOWNS AND
OF CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN &
RURAL DISTRICTS & PORT SANITARY
DISTRICTS IN ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 15TH JUNE,
1929

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1929.

Price 6d. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 15TH JUNE, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-fourth week of the year numbered 6,878 corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 273 corresponding to a rate of 38 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,845 (100 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

—	May 25.	June 1.	June 8.	June 15.
107 Great Towns	11·8	10·6	10·5	10·2
London	11·5	9·5	10·0	9·6
Birmingham	11·9	11·5	9·4	9·5
Liverpool	13·6	12·1	12·3	12·1
Manchester	13·2	13·0	12·6	11·7
Sheffield	10·9	8·7	10·2	10·3
Leeds	16·0	14·3	14·0	12·0
Bristol	11·1	11·1	9·2	8·4
West Ham	9·3	9·9	8·3	8·7

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54 against 68, 56 and 61 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,578 live births corresponding to an annual rate of 18·4 per 1,000 living: stillbirths numbered 43 corresponding to a rate of 27 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 824 (30 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 45 against 67, 52 and 51 in the three weeks preceding.

Note.—One death from small-pox which has been provisionally assigned to Brighton C.B. should have been reported in the return for the week ended 20th April last.

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ As extended 1st April, 1929.

SATURDAY	15	8.3	16.5	Very cloudy generally till 12h.; variably cloudy till 15½h.; then overcast. Mist about 6h. Solar halos 11½h.; and 16½h. till 16h. Brisk wind 16h. till 17h.
No. of Col. ..	26	Sum 61.0	Sum 115.4	
		27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the eastern of the barometer is 153 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., 9h. P.M. The means of the readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, issued by the Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1915.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine each day.

The reading of the barometer increased from 29.70 ins. at the beginning of the week to 30.17 ins. by 7h. on 11th; decreased to 29.54 ins. by 2h. on 13th; increased to 29.80 ins. by 2½h. on 13th; decreased to 29.58 ins. by 2½h. on 14th; increased to 29.84 ins. by 15h. on 15th; decreased and was 29.78 ins. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for previous year.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for previous year.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. TABLE 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000 according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, ophthalmia neonatorum, and puerperal pyrexia, which are notifiable either under the general law or under Orders which were made by the Local Government Board or Minister of Health.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; L, Dysentery; M, Ophthalmia Neonatorum; N, Puerperal Pyrexia. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 22ND JUNE, 1929.

BIRTHS AND DEATHS.

In the 107 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-fifth week of the year numbered 6,983 corresponding to an annual rate of 18·5 per 1,000 living: stillbirths numbered 288 corresponding to a rate of 40 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,755 (92 less than the number in the preceding week).

The annual death-rate based on the 1928 populations published in Table 1, in the Aggregate and in the largest of the County Boroughs and Great Towns in each of the last four weeks was as follows:—

	June 1.	June 8.	June 15.	June 22.
107 Great Towns	10·6	10·5	10·2	10·0
London	9·5	10·0	9·6	9·4
Birmingham	11·5	9·4	9·5	10·5
Liverpool	12·1	12·3	12·1	11·6
Manchester	13·0	12·6	11·7	10·5
Sheffield	8·7	10·2	10·3	8·1
Leeds	14·3	14·0	12·0	10·3
Bristol	11·1	9·2	8·4	9·5
West Ham	9·9	8·3	8·7	7·3

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54 against 56, 61 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,563 live births corresponding to an annual rate of 18·2 per 1,000 living: stillbirths numbered 60 corresponding to a rate of 37 per 1,000 total births (including stillborn): the civilian deaths (excluding stillbirths) numbered 800 (24 less than the number in the preceding week): infant mortality based on the average weekly number of live births during the last 52 weeks was 49 against 52, 51 and 45 in the three weeks preceding.

BELFAST† ..	415,151	182	?	85	14	-	-	-	3	-	4	1

* Population adjusted by the exclusion of non-civilians.

† The populations are estimated to the middle of 1929, except that of Belfast which is the 1926 Census
ure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally
rected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths
esidents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and
lfast are corrected by the exclusion of deaths of persons admitted into public institutions from without
e respective areas.

‡ As extended 1st April, 1929.
